

MAVALA introduces a range of protective Tinted Lip Balms

Available in vanilla, peach, candy and berry, this range of Tinted Lip Balms offers a nourishing, moisturizing and repairing layer – especially after removing a face mask or other protective gear as a response to COVID-19

MAVALA, the Swiss skin care and beauty expert, has developed a range of four nourishing, moisturizing, repairing and protective Tinted Lip Balms, which also wrap the lips with their delicate, light and flattering shades and leave a delicious fragrance on the lips. The beauty product has been gluten free and dermatologically tested.

Brightening your complexion, the ultra-fine and non-sticky texture of this range gives lips comfort and elasticity. The Tinted Lip Balms are available in vanilla, peach, candy and berry flavors. The formula, which contains a botanical complex based on Paterson's curse oil, heart seed and sun-lower extract, apricot extract, aloe vera and shea butter, as well as SPF 15 sun protection filters, guarantees the ideal care for soft and hydrated lips.

During this unprecedented period, after weeks of confinement due to COVID-19, we will have to learn to live differently and be required to wear a mask during some outings and meetings. Wearing a surgical mask or other protective face gear can cause skin irritation and dry lips. Therefore, the nourishing and repairing MAVALA Tinted Lip Balms will bring comfort and hydration to your lips as soon as you remove your mask.

How to use: apply daily, as often as necessary or desired.
